Connecting to Secure Wireless

Quick Setup: Windows 8 (Start Screen)

1. From the start screen (says “Start” at the top left hand corner), move your mouse to the top, right hand corner until the charms bar appears on that side of the screen. Or, if you have no mouse, slide your finger inward from the screen’s right edge.

2. Click on the “Settings” icon at the bottom of the menu. It looks like a gear.
3. Click on the Wireless Networks icon near the bottom. It looks like a rising bar graph.

4. Click MC-Secure.
5. Click on “Connect”.
   *If you would like your computer to automatically connect in the future, check the “Connect automatically” box.

6. Type in your Madison College username and password; then click “OK”.
   a. This is the same username you use to connect to Madison College email.
   b. Only type in your username, not the “@MadisonCollege.edu” portion.
7. You may see a warning message informing you that your computer can’t verify the server’s identity. Accept the certificate by clicking “Connect”.

8. Wait a moment while the computer connects.
9. When your computer is connected, you will see “Connected” printed beside the MC-Secure wireless network.
